Achievements

In my journey as a MERN stack developer, I had the opportunity to create two exciting web applications: a basic yet functional Learning Management System (LMS) and a delightful recipe showcasing app. With the LMS, I designed a platform that allowed users to access educational materials. As for the recipe showing app, I crafted an engaging platform where users could explore a wide range of mouthwatering recipes, complete with images and step-by-step instructions. This project not only expanded my proficiency in front-end design but also deepened my understanding of Node.js and Express.js on the back-end.
